I greatly enjoyed his teaching overall. He is a very nice professor who is willing to help you along the way with any problems that you may have. I greatly appreciate that he asks us questions concerning the course and our learning after each exam. I feel as though it helps us grasp how we feel and where we stand in the class. Any concerns we address there he immediately acts upon. I also like that the test and homework relate to what we learned in class. I had a great time with him being my professor and I am grateful.

Professor Pu has been the only professor I've had that cared so much about the passing of his students. As a student, I really appreciate that.

Comments for questions 48-64

This teacher is one of the best I've had at my time at UWF. You can tell he really cares for his students and goes out of his way to help them.

Comments for questions 48-64

Dr. Pu was hands down the best math teacher I have ever taken in my entire academic career. Dr. Pu focuses on learning and understanding the material without the direct worry of making a perfect grade. The way he has designed the class is genius and allows me to learn more in this class than I probably have in any other. Dr. Pu directs his class from the in-class material to the homework, and from there to the quizzes and the exams. The homework can be difficult and require outside research, however, it forces you to learn the material in the best way possible and allows a level of understanding of the course material that directly correlates to the rest of the course. The way the course is designed allowed me to learn a large amount of material without feeling like I was overwhelmed or like I had to spend forever studying to understand. Overall, Dr. Pu's teaching of the Linear Algebra Course was the most well-designed and taught course I have taken so far at UWF.
